Java Full Stack Developer | Java Backend Engineer

PROFESSIONAL SUMMARY

Java Full Stack Developer with 5+ years of experience developing, modernizing, integrating, and supporting enterprise applications across financial services, banking, and transaction monitoring domains. Proficient in Java 8/11/17/21, J2EE, Spring Boot, Spring MVC, Spring Framework 6, Hibernate, JPA, REST/SOAP APIs, Angular, TypeScript, JavaScript, and SQL, with hands-on experience building backend services, reusable UI components, database-driven applications, secure APIs, and microservices. Strong knowledge of OOP, SOLID principles, design patterns, dependency injection, API security, database optimization, unit testing, legacy modernization, Jakarta EE migration, Docker, Kubernetes, CI/CD, and Azure DevOps**,** with experience in Agile/Scrum, production support, troubleshooting, root cause analysis, defect resolution, and release activities**.**

CORE TECHNICAL SKILLS

Programming: Java 8/11/17/21, JavaScript ES6+, TypeScript, SQL, XML, JSON, J2EE, JSP, Servlets, JDBC

Frontend: Angular, Angular CLI, React.js, HTML5, CSS3, Responsive Web Design, REST API Integration

Backend & Frameworks: Spring Boot, Spring Framework, Spring MVC, Spring Security, Spring Data JPA, Hibernate, JPA, Jakarta EE, Microservices, Dependency Injection, OOP, SOLID, Design Patterns

APIs & Integration: RESTful APIs, SOAP Web Services, Swagger/OpenAPI, API Integration, DTO Mapping, JSON, XML

Databases: Oracle, MySQL, MSSQL, MongoDB, Stored Procedures, Query Optimization, Transactions, Data Persistence

Security & Messaging: JWT, RBAC, BCrypt, CORS, Authentication & Authorization, Apache Kafka, Kafka Producers/Consumers, Event-Driven Architecture, Asynchronous Messaging

Cloud & DevOps: AWS EC2, S3, RDS, IAM, Docker, Kubernetes, Azure DevOps, CI/CD, Git, GitHub, Maven, Gradle

Testing & Tools: JUnit, Mockito, Unit & Integration Testing, API Testing, Postman, SoapUI, Apache Tomcat, WebLogic, IntelliJ IDEA, STS, Eclipse, VS Code, Jira, MySQL Workbench

Methodologies: Agile/Scrum, SDLC, Code Reviews, Production Support, Application Maintenance, Root Cause Analysis.

PROFESSIONAL EXPERIENCE

Product Implementation Engineer – Java Full Stack / Application Support

Azentio Software Pvt. Ltd. — Hyderabad, India **May 2024 – June 2026**

Project: AMLOCK – Anti-Money Laundering (AML) and Transaction Monitoring System

Clients: ICICI Bank Canada, Bank of Baroda India

- Developed and supported enterprise full-stack applications using Java 17/21, Spring Boot, Spring MVC, Spring Data JPA, Hibernate, Angular, TypeScript, JavaScript, HTML5, and CSS3 for banking, transaction monitoring, compliance, and reporting workflows.
- Developed backend business logic, application services, and RESTful/SOAP APIs using Java, Spring, JSON, and XML, supporting enterprise integrations and business processes.
- Built reusable Angular components, frontend services, form validation, and REST API integrations using TypeScript, JavaScript, HTML5, and CSS3.
- Worked with Java/J2EE, JSP, Servlets, Jakarta EE, and Java RMI across enterprise application development, maintenance, and modernization initiatives.
- Applied OOP, SOLID principles, dependency injection, layered architecture, and design patterns to develop maintainable and scalable applications.
- Developed database functionality using Oracle, MySQL, and MSSQL, including SQL queries, stored procedures, data validation, transaction management, and troubleshooting.
- Supported legacy application modernization through Spring Framework 6, Jakarta EE, JDK 17/21 compatibility, dependency upgrades, and application-server migration activities.
- Developed PDF and document-generation solutions using OpenPDF/iText and Apache POI for business and regulatory reporting requirements.
- Supported application builds, deployments, and releases using Git, Maven, Azure DevOps, Docker, and Apache Tomcat.
- Performed debugging, log analysis, API testing, and root cause analysis to resolve frontend, backend, API, database, configuration, and integration issues using Postman and SoapUI.
- Collaborated with development, QA, and business teams in Agile/Scrum environments, contributing to code reviews, testing, defect resolution, production support, and release activities.

Technology Environment: Java 17/21, Java/J2EE, Angular, TypeScript, JavaScript, HTML5, CSS3, JSP, Servlets, Spring Boot, Spring Framework 6, Spring MVC, Spring Data JPA, Hibernate, Jakarta EE, Java RMI, REST APIs, SOAP Web Services, JSON, XML, Oracle, MySQL, MSSQL, Docker, Azure DevOps, Git, Maven, Apache Tomcat, Postman, SoapUI, STS, Agile/Scrum.

Java Full Stack Developer – Frontend, Backend & Production Support

IDC Technologies Solutions Pvt. Ltd. — Bangalore, India **April 2021 – April 2024**

Project: Enterprise Wealth Management and Financial Services Platform

- Developed and maintained enterprise full-stack applications using Java 17, Spring Boot, Spring MVC, Angular, TypeScript, JavaScript, Hibernate, JPA, REST APIs, and relational databases.
- Built reusable Angular components, forms, validation, routing, services, and REST API integrations using TypeScript, HTML5, and CSS3.
- Developed backend business logic, RESTful APIs, and enterprise services using Java, Spring Boot, Spring Data JPA, Hibernate, JDBC, JSON, and XML, following layered architecture and clean coding practices.
- Worked with J2EE, JSP, Servlets, Java RMI, and legacy enterprise applications, supporting application modernization and maintenance.
- Developed database-driven functionality using Oracle, MySQL, and MSSQL, including SQL queries, stored procedures, transaction management, and query troubleshooting.
- Applied OOP, SOLID principles, Java Collections, Streams API, design patterns, and dependency injection to develop maintainable and scalable solutions.
- Integrated Apache Kafka producers and consumers to support event-driven communication and asynchronous processing.
- Implemented application security using Spring Security, JWT, RBAC, BCrypt, and CORS for secure authentication and authorization.
- Supported Docker, Kubernetes, Azure DevOps, CI/CD, Git, and Maven for application builds, deployments, and release activities.
- Developed unit and integration tests using JUnit and Mockito and performed API validation using Postman and Swagger/OpenAPI.
- Troubleshot frontend, backend, API, database, configuration, and deployment issues, performing debugging, root cause analysis, and defect resolution.
- Collaborated with development and QA teams in Agile/Scrum environments, participating in code reviews, testing, sprint activities, production support, and release readiness.

Technology Environment: Angular, TypeScript, JavaScript, HTML5, CSS3, Java 17, Java/J2EE, JSP, Servlets, Java RMI, Spring Boot, Spring Framework, Spring MVC, Spring Data JPA, Hibernate, Microservices, REST APIs, SOAP Web Services, JSON, XML, Spring Security, JWT, Apache Kafka,

Oracle, MySQL, MSSQL, MongoDB, Docker, Kubernetes, Azure DevOps, CI/CD, Git, Maven, JUnit, Mockito, Swagger/OpenAPI, Postman, Agile/Scrum.

PROJECT EXPERIENCE

Power Reading System – Smart Electricity Billing Platform

Personal Full Stack Project | Java 21 | Spring Boot | Angular | MySQL | Docker

- Developed a full-stack electricity billing platform using Angular and Java Spring Boot, supporting customer management, meter readings, automated billing, payment workflows, OCR-based reading extraction, and administrative functionality.
- Built reusable Angular components using TypeScript, JavaScript, HTML5, and CSS3, with form validation, routing, frontend services, and REST API integration.
- Developed 30+ RESTful APIs using Java 21, Spring Boot, Spring MVC, Spring Data JPA, Hibernate, and MySQL for authentication, customer management, billing, payments, OCR, and administration.
- Applied DTO mapping, input validation, centralized exception handling, layered architecture, and clean coding practices to support maintainable backend services.
- Implemented API security using Spring Security, JWT, RBAC, and BCrypt.
- Integrated Tesseract OCR for extracting meter readings and developed billing and tariff-calculation functionality.
- Implemented PDF generation using iText and supported data persistence through MySQL.
- Used Postman, Swagger/OpenAPI, application logs, and exception handling to test, troubleshoot, and validate APIs.
- Containerized the application using Docker and managed builds and dependencies with Maven.
- Developed unit tests using JUnit and Mockito and managed source code through Git and GitHub.
- Designed a cloud-ready application architecture compatible with AWS EC2, AWS RDS, and Docker-based deployment environments.

Technology Environment: Angular, TypeScript, JavaScript, HTML5, CSS3, Java 21, Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, REST APIs, JSON, JWT, RBAC, MySQL, Docker, Maven, Git, GitHub, AWS EC2, AWS RDS, Tesseract OCR, iText PDF, Swagger/OpenAPI, Postman, JUnit, Mockito.

EDUCATION

Bachelor of Technology (B.Tech) | 2018

Rajiv Gandhi University of Knowledge Technologies, India
