SAI VARDHINI PANTLA

SENIOR JAVA SOFTWARE DEVELOPER | SPRING BOOT | MICROSERVICES

Ottawa, Ontario, Canada | 613-712-7873 | vardhinips97@gmail.com | Canadian Permanent Resident – Authorized to work in Canada

PROFESSIONAL SUMMARY

Senior Java Software Developer with 7+ years of experience developing, modernizing, integrating, and supporting enterprise applications across financial services, banking, wealth management, and anti-money laundering/transaction-monitoring domains. Strong hands-on expertise in Java 8/11/17/21, Spring Boot, Spring MVC, Spring Data JPA, Hibernate, REST APIs, and microservices. Experienced in building secure backend services, integrating systems through Apache Kafka and REST/SOAP services, and developing database-driven applications with Oracle, MySQL, and Microsoft SQL Server. Skilled in Spring Security, JWT, role-based access control, Docker, Kubernetes, AWS services, Azure DevOps, CI/CD, automated testing, production troubleshooting, root cause analysis, and Agile delivery across the software development lifecycle. Background includes supporting Canadian banking clients and business-critical financial applications.

CORE TECHNICAL SKILLS

Programming & Core: Java 8/11/17/21, J2EE, JavaScript ES6+, TypeScript, SQL, JDBC, JSP, Servlets, XML, JSON, OOP, SOLID, design patterns

Backend & Architecture: Spring Boot, Spring Framework, Spring MVC, Spring Security, Spring Data JPA, Hibernate, JPA, Microservices, RESTful services, layered architecture, dependency injection

Messaging & Integration: Apache Kafka, Kafka producers and consumers, event-driven architecture, asynchronous messaging, REST APIs, SOAP web services, MuleSoft, Swagger/OpenAPI

Databases: Oracle, MySQL, Microsoft SQL Server (MSSQL), MongoDB, relational data modelling, stored procedures, transactions, query troubleshooting and optimization

Cloud, Containers & CI/CD: AWS EC2, S3, RDS, IAM, Microsoft Azure DevOps, Docker, Kubernetes, Jenkins, Git, GitHub, Maven, Gradle, CI/CD pipelines

Security & Testing: JWT, authentication, authorization, RBAC, BCrypt, CORS, secure API development, JUnit, Mockito, unit testing, integration testing, Postman, SoapUI

Frontend: Angular, Angular CLI, React.js, TypeScript, JavaScript, HTML5, CSS3, responsive UI, REST API integration

Delivery & Operations: Agile/Scrum, SDLC, code reviews, application maintenance, production support, log analysis, debugging, root cause analysis, defect resolution, release support

PROFESSIONAL EXPERIENCE

Product Implementation Engineer – Java Full Stack / Application Support | Azentio Software Pvt. Ltd.

Hyderabad, India | May 2024 – June 2026

Project: AMLOCK – Anti-Money Laundering (AML) and Transaction Monitoring System | Clients: ICICI Bank Canada and Bank of Baroda

- Developed, enhanced, and supported enterprise banking and financial-services applications using Java 17/21, Spring Boot, Spring MVC, Spring Data JPA, Hibernate, Angular, TypeScript, JavaScript, HTML5, and CSS3.
- Implemented backend business logic, service-layer components, and RESTful/SOAP APIs using Java, Spring, JSON, and XML to support financial workflows, reporting, and enterprise integrations.
- Built reusable Angular components, frontend services, form validations, and REST API integrations using TypeScript, JavaScript, HTML5, and CSS3.
- Developed and maintained database functionality using Oracle, MySQL, and MSSQL, including SQL queries, stored procedures, transaction handling, data validation, and database issue troubleshooting.
- Applied object-oriented design, SOLID principles, dependency injection, layered architecture, and design patterns to deliver maintainable application components.
- Supported application modernization and compatibility initiatives involving Spring Framework 6, Jakarta EE, JDK 17/21, dependency upgrades, and application-server migration activities.
- Created PDF and document-generation functionality using OpenPDF/iText and Apache POI for business and regulatory reporting requirements.
- Supported builds, deployments, and releases using Git, Maven, Azure DevOps, Docker, and Apache Tomcat.
- Performed debugging, application-log analysis, API testing, root cause analysis, and defect resolution across frontend, backend, database, configuration, and integration layers.
- Collaborated with development, QA, and business teams in Agile/Scrum delivery, contributing to testing, code reviews, defect resolution, production support, and release activities.

Java Full Stack Developer – Frontend, Backend & Production Support | IDC Technologies Solutions Pvt. Ltd.

Bangalore, India | April 2021 – April 2024

Project: Enterprise Wealth Management and Financial Services Platform

- Developed and maintained enterprise financial-services applications using Java 17, Spring Boot, Spring MVC, Spring Data JPA, Hibernate, Angular, TypeScript, JavaScript, and relational databases.

- Designed and implemented backend business logic, RESTful APIs, and enterprise services using Java, Spring Boot, JDBC, JSON, and XML following layered architecture and clean coding practices.
- Integrated Apache Kafka producers and consumers to enable event-driven communication and asynchronous processing between application components.
- Implemented application security using Spring Security, JWT, role-based access control (RBAC), BCrypt, and CORS to support authentication and authorization.
- Developed reusable Angular components, forms, validation, routing, frontend services, and REST API integrations using TypeScript, HTML5, and CSS3.
- Built database-driven functionality using Oracle, MySQL, and MSSQL, including SQL queries, stored procedures, transaction management, and query troubleshooting.
- Applied Java Collections, Streams API, OOP, SOLID principles, dependency injection, and design patterns to improve maintainability and code quality.
- Supported containerization, deployment, and delivery activities using Docker, Kubernetes, Azure DevOps, CI/CD, Git, and Maven.
- Created unit and integration tests using JUnit and Mockito and validated APIs using Postman and Swagger/OpenAPI.
- Investigated frontend, backend, API, database, configuration, and deployment issues; performed debugging, root cause analysis, and defect resolution.
- Participated in Agile/Scrum ceremonies, code reviews, testing, production support, sprint activities, and release-readiness activities.

Software Developer | Instinct Mind Technologies

India | November 2018 – February 2021

Project: Minto – Canada | Java / Spring Boot Application Development

- Developed Java and Spring Boot applications and REST APIs to implement business requirements and backend workflows.
- Integrated Spring Boot REST services with MuleSoft to support application and system-to-system integration.
- Implemented MongoDB persistence and data-retrieval operations using Spring Data MongoDB.
- Developed reusable business components using object-oriented programming and layered architecture principles.
- Performed unit testing with JUnit and supported defect resolution, application validation, and troubleshooting.
- Used Git for source-code management and supported Jenkins-based build and deployment activities across Development and Production environments.

SELECTED PROJECT EXPERIENCE

Power Reading System – Smart Electricity Billing Platform

Personal Full-Stack Project | Java 21 | Spring Boot | Angular | MySQL | Docker

- Designed and developed a full-stack electricity billing platform using Angular and Java 21/Spring Boot, including customer management, meter readings, automated billing, payment workflows, OCR-based reading extraction, and administration.
- Built 30+ RESTful APIs using Spring Boot, Spring MVC, Spring Data JPA, Hibernate, and MySQL for authentication, customer management, billing, payments, OCR, and administration.
- Implemented DTO mapping, input validation, centralized exception handling, layered architecture, and API security using Spring Security, JWT, RBAC, and BCrypt.
- Integrated Tesseract OCR for meter-reading extraction and developed billing, tariff-calculation, and PDF-generation functionality.
- Containerized the application using Docker; used Maven, Git/GitHub, Postman, Swagger/OpenAPI, JUnit, and Mockito for build management, API validation, and testing.
- Designed a cloud-ready architecture compatible with AWS EC2 and AWS RDS deployment environments.

EDUCATION

Bachelor of Technology (B.Tech) | 2018

Rajiv Gandhi University of Knowledge Technologies, India
